Screencast Guide

CSE 360, Fall 2026 (C) · Team 24: Arush Ugal, Karan Patel, Anirudh B, Pranjal Ganvir, Moksha Dev
Working document for recording; not part of the submission. Generated from the TP2 folders on October 25, 2026.

Every screencast

MP4 or MOV, under 100 MB, recorded to the Zoom cloud, readable text (zoom the browser to 125%). Two presenters each; times follow the presenting plan in Plan and Status 2026-10-24. Start each main screencast by showing its requirements table below; it is the "list of deliverable requirements" the rubric asks for (9.1.1, 9.2.1, 9.3.1).

File	Length	Presenters	Shows
LessonsLearnedScreencast	5–10 min (aim 6)	Arush 3.5, Anirudh 2.5	Lessons_Learned_Javadocs
PhaseTwoGUIScreencast	5–10 min (aim 9)	Karan 4.5, Moksha 4.5	Contributor_Javadocs, the running GUI
TestingScreencast	8–15 min (aim 12)	Pranjal 6.5, Anirudh 5.5	ContributorTests_Javadocs, a live run of every test
Status Summary 2026-MM-DD (6)	3–5 min	see each Plan and Status	that standup's slides and PDF

LessonsLearnedScreencast: Task 3 items

Item	Requirement	Show these files

3.1	Both classes are in the entityClasses package (screenshot).	`3.1-entityClasses-package-declarations.png`
		`3.1-entityClasses-package-source-tree.png`
		`3.1-entityClasses-package-summary-javadoc.png`
		`entityClasses/package-summary.html`

3.2	Both classes fully implement CRUD, as shown by the Javadoc.	`3.2-LessonsLearned-create.png`
		`3.2-LessonsLearned-delete-and-validate.png`
		`3.2-LessonsLearned-read-and-update.png`
		`3.2-LessonsLearnedDatabase-addLesson.png`

TestingScreencast: Task 7 items

Run `TP2TestRunner` on screen after showing the Javadoc; scroll through each suite and say, for two or three tests per suite, which requirement the line proves and why a Pass means it holds. Then carry out MAN-01 to MAN-07 in the running application with `LessonsManualTestProcedures` open beside it.

Item	Requirement	Show these files
7.1	A list of all TP2 requirements, each with HTML files and screenshots.	`../Requirements to Tests Map.pdf (pages 1-2)`

7.2	Two or more tests per requirement, positive and negative, documented in the Javadoc.	`../Requirements to Tests Map.pdf (Requirements and their tests)`
		`testingAutomation/LessonValidationTestingAutomation.html`
		`testingAutomation/LessonsCrudTestingAutomation.html`
		`testingAutomation/LessonsListTestingAutomation.html`
		`testingAutomation/LessonsManualTestProcedures.html`
		`testingAutomation/LessonsModelTestingAutomation.html`
		`testingAutomation/TP2TestRunner.html`
		`testingAutomation/package-summary.html`

7.3	Each test's Javadoc names the requirement, how the code satisfies it, how to read the output.	`Method Detail section of each suite page, e.g.` `testingAutomation/LessonsCrudTestingAutomation.html#crud11And12PersistAcrossReopen()`

Item	Requirement	Show these files
7.4	Each test's commented source code (one screenshot per test method).	7.4-CRUD-01-CreateValidLesson.png 7.4-CRUD-02-CreateBlankTitleRefused.png 7.4-CRUD-03-ReadById.png 7.4-CRUD-04-ReadUnknownId.png 7.4-CRUD-05-UpdatePersists.png 7.4-CRUD-06-UpdateBlankTitleRefused.png 7.4-CRUD-07-Delete.png 7.4-CRUD-08-DeleteTwice.png 7.4-CRUD-09-OwnerRecognised.png 7.4-CRUD-10-NonOwnerNotRecognised.png 7.4-CRUD-11-CRUD-12-PersistAcrossReopen.png 7.4-CRUD-13-CRUD-14-OpenHw2Layout.png 7.4-LIST-01-ReadAllReturnsEveryLesson.png 7.4-LIST-02-EmptyDatabaseGivesEmptyList.png 7.4-LIST-03-SearchFindsKeyword.png 7.4-LIST-04-SearchForAbsentTerm.png 7.4-LIST-05-FilterByCategory.png 7.4-LIST-06-FilterByAbsentCategory.png 7.4-LIST-07-MyLessons.png 7.4-LIST-08-LessonsOfUnknownUser.png 7.4-LIST-09-CategoriesOffered.png 7.4-LIST-10-SearchThenFilter.png 7.4-LIST-11-NewestFirst.png 7.4-LIST-12-SearchIgnoresCase.png 7.4-LIST-13-EmptySearchTerm.png 7.4-LessonValidationTestingAutomation-class-javadoc.png 7.4-LessonsCrudTestingAutomation-class-javadoc.png 7.4-LessonsListTestingAutomation-class-javadoc.png 7.4-LessonsManualTestProcedures-class-javadoc.png 7.4-LessonsModelTestingAutomation-class-javadoc.png 7.4-MAN-01-EmptyListMessage.png 7.4-MAN-02-CreateSetsContributor.png 7.4-MAN-03-RefusedFieldIsNamed.png 7.4-MAN-04-DeleteAsksFirst.png 7.4-MAN-05-OtherUserCannotChange.png 7.4-MAN-06-DeleteSeenByOtherUser.png 7.4-MAN-07-RestartKeepsLessons.png 7.4-MOD-01-SaveNewLesson.png 7.4-MOD-02-SaveNewLessonBlankTitle.png 7.4-MOD-03-NoFiltersShowsAll.png 7.4-MOD-04-MessageWhenUserHasNoLessons.png 7.4-MOD-05-Search.png 7.4-MOD-06-SearchForAbsentTerm.png 7.4-MOD-07-CategoryFilter.png 7.4-MOD-08-AbsentCategory.png 7.4-MOD-09-OnlyMine.png 7.4-MOD-10-OnlyMineForUserWithNone.png 7.4-MOD-11-OwnerMayChange.png 7.4-MOD-12-NonOwnerMayNotChange.png 7.4-MOD-13-OwnerUpdate.png 7.4-MOD-14-UpdateBlankDescription.png 7.4-MOD-15-OwnerDelete.png 7.4-MOD-16-NonOwnerDelete.png 7.4-MOD-17-MessageForNoSearchMatch.png 7.4-MOD-18-MessageForNoCategoryMatch.png 7.4-MOD-19-MessageWhenNoLessonsStored.png 7.4-MOD-20-NonOwnerEdit.png 7.4-TP2TestRunner-class-javadoc.png 7.4-TP2TestRunner-main.png

Item	Requirement	Show these files

Script: LessonsLearnedScreencast

Target 6 minutes (allowed 5–10). Arush Ugal about 3.5 minutes, then Anirudh B about 2.5 minutes. Before recording: open `Lessons_Learned_Javadocs/index.html` in Chrome at 125%, open the folder in Finder, and open this guide at the Task 3 table.

Arush Ugal about 3.5 minutes

[Show this guide, the "LessonsLearnedScreencast: Task 3 items" table.]

This is the LessonsLearned screencast for Team 24. I'm Arush Ugal, and I'm presenting with Anirudh B. We're showing the Lessons_Learned_Javadocs folder, which documents the two entity classes, LessonsLearned and LessonsLearnedList. This table is the list of deliverable requirements, 3.1 to 3.5, and next to each one are the HTML pages and screenshots that satisfy it. We'll go through them in that order.

[Open `3.1-entityClasses-package-source-tree.png`, then `3.1-entityClasses-package-declarations.png`, then `3.1-entityClasses-package-summary-javadoc.png`.]

Requirement 3.1 is that both classes are in the entityClasses package. The first screenshot is the source tree: LessonsLearned.java and LessonsLearnedList.java sit in entityClasses, next to the supplied User class. The second shows line 1 of each file, "package entityClasses". The third is the generated package page, which lists both classes and describes what the package is for.

[Open `entityClasses/LessonsLearned.html`; scroll through the class description.]

This is the Javadoc for LessonsLearned. One object is one lesson. The description says what the class is for, why three attributes are stored now for TP3, and then a list that maps each Contributor requirement, CS-1 to CS-12, to the method that implements it. That mapping is requirement 3.4. The screenshot `3.4-LessonsLearned-class-javadoc.png` shows the same text in the source.

[Scroll to Field Summary; open `3.3-LessonsLearned-attributes-contributor-stories.png` and `3.3-LessonsLearned-attributes-TP3-epics.png`.]

Requirement 3.3 is the attributes. The Field Summary lists all twelve, including the private ones, because the Javadoc was generated with the private option. In the source, each attribute starts with "Source", the requirement it comes from, and then the reason it's stored that way. For example, contributor comes from CS-1, CS-6, and CS-9: it's taken from the logged-in user and never typed, so nobody can post as someone else. The second screenshot shows the three TP3 attributes: review status, reviewer comment, and helpful count. We store them now so the table doesn't have to change once it already holds lessons.

[Scroll to Method Summary; open the three `3.2-LessonsLearned-*` screenshots in turn.]

Requirement 3.2 is CRUD. Create validates first, refuses a lesson that's already stored, sets both dates, and writes the row. Read is static, because there's no object until the row is read. Update runs the same validation as create, and if the write fails it puts the old date back, so the object never claims a change the database doesn't have. Delete sets the id back to minus one. Validate is the single call that both create and update make.

[Open `3.4-LessonsLearned-constructors.png`, then the two `3.5-LessonsLearned-*` screenshots.]

There are two constructors: one for a new lesson, with no id and no dates, and one for a row read back from the database. Requirement 3.5 is comments that explain code that isn't obvious. This block explains why there's no setter for the contributor, the dates, or the TP3 attributes. And this one explains why isOwnedBy compares exactly, and why an empty search term matches nothing. Anirudh will now cover LessonsLearnedList.

Anirudh B about 2.5 minutes

[Open `entityClasses/LessonsLearnedList.html`, then `3.4-LessonsLearnedList-class-javadoc.png` and `3.3-LessonsLearnedList-attribute.png`.]

I'm Anirudh. LessonsLearnedList holds a list of lessons. readAll gives the persistent list of every lesson in the system, and every other list is a subset of it. The class Javadoc explains why a subset comes back as another LessonsLearnedList: you can narrow it again, count it, or show it with the same code. It has one attribute, an ArrayList, declared final, with its source and rationale written above it.

[Open the two `3.2-LessonsLearnedList-*` screenshots and `3.2-LessonsLearnedDatabase-addLesson.png`.]

For requirement 3.2, the list's CRUD is readAll, createLesson, updateLesson, and deleteLesson. Each one writes to the database first and changes the in-memory list only if the write succeeded. Underneath is LessonsLearned-Database. addLesson uses a PreparedStatement and reads back the key the database generated.

[Open `3.4-LessonsLearnedList-subsets.png` and `3.4-LessonsLearnedList-contributor-and-categories.png`.]

These are the subsets: search, which covers title, description, and keywords and ignores case; filter by category; filter by contributor, which uses the same isOwnedBy test as the ownership rule; and getCategories, which fills the category filter on the list page.

[Open the `3.5-LessonsLearnedDatabase-*`, `3.5-LessonInputPolicy-*`, and `3.5-LessonsLearnedList-getAll-returns-copy.png` screenshots.]

The rest of requirement 3.5 is here. createTables explains why the new columns are added with ALTER TABLE rather than in the CREATE statement. moveLegacyTableAside fixes a defect we found: an HW2 table with different columns made every save fail with "Column DESCRIPTION not found". Now that table is renamed and kept, never dropped. getAllLessons orders by id rather than by date. updateLesson's comment explains which columns an edit can't change. checkLongText records the HW2 defect that refused any description over 256 characters. And getAll returns a copy, so a caller can't change the list behind its back. That's the Lessons_Learned_Javadocs folder. Thanks for watching.

Script: PhaseTwoGUIScreencast

Target 9 minutes (allowed 5–10). Karan Patel about 4.5 minutes (guiLessonsList and the overall structure), then Moksha Dev about 4.5 minutes (guiLessonEditor and guiLessonDetail). Before recording: open `Contributor_Javadocs/index.html`, the folder in Finder, and this guide at the Task 4 table. Have the application running for Moksha's last part.

Karan Patel about 4.5 minutes

[Show this guide, the "PhaseTwoGUIScreencast: Task 4 items" table.]

This is the Phase Two GUI screencast for Team 24. I'm Karan Patel, presenting with Moksha Dev. We're showing the Contributor_Javadocs folder. This table lists the five deliverable requirements, 4.1 to 4.5, and next to each one the HTML pages and screenshot names that cover it.

[Open `4.1-Contributor-packages-overview-javadoc.png`, `4.1-gui-packages-source-tree.png`, then the three `4.1-*-package-classes-javadoc.png`.]

For requirement 4.1 there are three new packages: guiLessonsList, guiLessonEditor, and guiLessonDetail. They're named the same way as the supplied packages, like guiUserLogin and guiRole1. The source tree shows each package has exactly three classes, a Model, a View, and a Controller. The tree also marks the two home pages that got a Lessons Learned button. These package pages list the classes in each one.

[Open `4.2-guiLessonsList-View-wires-Controller.png`.]

Requirement 4.2 is that we use MVC the way Foundations does. In the View's constructor, every control gets a setOnAction that calls a Controller method: Search, Show All, the category box, Only my lessons, New Lesson, Open, Back, and Quit. The View doesn't make any decisions.

[Open `4.2-guiLessonsList-Controller-asks-Model.png`.]

The Controller reads the controls, asks ModelLessonsList what to show and what the status line should say, and puts the answer on screen. One difference from the supplied packages: there the Model is empty, but ours holds data, because this page narrows a list and has to explain the result. It has no JavaFX in it, so the tests can check its decisions directly.

[Open `guiLessonsList/ModelLessonsList.html`, scroll to the Field Summary; then `4.4-ModelLessonsList-attributes.png`, `4.4-ViewLessonsList-attributes.png`, and the three `4.4-*LessonsList-class-javadoc.png`.]

Requirement 4.4 is documenting purpose, attributes, and operations. ModelLessonsList has two attributes, the full list and the subset on screen, each with its source requirement. The View's attributes are the widgets, grouped by area. The class Javadoc for each of the three says what the class is for, its role in MVC, and which requirements it supports: CS-2, CS-3, CS-4, CS-5, and CS-6, plus the entry point to CS-1.

[Open `4.5-ModelLessonsList-applyFilters.png`, `4.5-ModelLessonsList-statusMessage.png`, `4.5-ControllerLessonsList-reloadLessons-fillCategories.png`.]

Requirement 4.5 is comments that explain code that isn't obvious. applyFilters explains why an empty search box shows every lesson on this page, while the list class treats an empty term as matching nothing. statusMessage explains why an empty result is described in words that name the filter, so the user knows which filter to change. reloadLessons explains why the page re-reads the database instead of keeping what's in memory: that's how lessons from an earlier run show up.

[Open `4.4-guiRole1-Lessons-Learned-button.png` and the two `performLessonsLearned` screenshots.]

The way in is the Lessons Learned button on the Role1 and Role2 home pages. Each one calls performLessonsLearned, which passes the current stage and user along, so Back returns to the right home page. Moksha will now cover the editor and the detail page.

Moksha Dev about 4.5 minutes

[Open `guiLessonEditor/package-summary.html`, `4.4-guiLessonEditor-package-info.png`, `4.2-guiLessonEditor-View-and-Controller.png`.]

I'm Moksha. guiLessonEditor is one page used for both a new lesson and an edit, because the fields and rules are the same. The package description lists the requirements it covers: CS-1, CS-7, CS-9, and the on-screen side of

CS-10 and CS-11. For MVC, pressing Save Lesson calls performSave in the Controller. That reads the fields, calls the Model, and if a field is refused, shows it in a ValidationAlert.

[Open `4.4-ViewLessonEditor-attributes.png`, `4.4-ModelLessonEditor-class-javadoc.png`.]

Look at the View's attributes: the contributor is a Label, not a TextField, so it can't be typed. Each field has a character counter for the CS-11 limits.

[Open `4.5-ModelLessonEditor-saveNewLesson.png`, `4.5-ModelLessonEditor-saveChanges.png`, `4.5-ModelLessonEditor-tidyKeywords.png`.]

For 4.5, saveNewLesson records why the contributor comes from the login: in HW2 it was a text field, and that let anyone post in someone else's name. saveChanges checks ownership again, even though the page only offers Edit to the contributor. It refuses an untouched form, and it changes a copy rather than the original, so a refused save can't leave the list showing values the database doesn't have. tidyKeywords drops duplicates but keeps an empty entry, so validation can report it instead of the editor quietly changing what was typed.

[Open `guiLessonDetail/package-summary.html`, `4.4-ViewLessonDetail-attributes.png`, `4.4-ViewLessonDetail-displayLessonDetail.png`, `4.4-ModelLessonDetail-canChange-ownershipNote.png`.]

guiLessonDetail shows one lesson in full, which is CS-3, including the TP3 review line as read-only. displayLessonDetail turns Edit and Delete on only for the contributor. The rule comes from canChange in the Model, and ownershipNote explains on screen whose lesson it is. That's CS-9.

[Open `4.2-guiLessonDetail-View-and-Controller.png` and `4.5-ModelLessonDetail-deleteLesson.png`.]

Delete Lesson calls performDelete, which asks for confirmation before it calls the Model. That's CS-8. In deleteLesson, the comment explains why ownership is checked again in the Model: the button is already disabled, but no other route to this method should be able to get around the rule.

[Open `4.5-FoundationsMain-lessonsDatabase.png`; then switch to the running application, open the list, a lesson, and the editor for about 30 seconds.]

Finally, FoundationsMain opens the lessons table when the application starts, and the comment explains why a second connection to the same file doesn't trigger the "already in use" alert. Here are the three pages running: the list with search and filters, the detail page with Edit and Delete, and the editor with its counters. That's the Contributor_Javadocs folder. Thanks for watching.

Script: TestingScreencast

Target 12 minutes (allowed 8–15). Pranjal Ganvir about 6.5 minutes (the map, the test documentation, and the Validation and CRUD runs), then Anirudh B about 5.5 minutes (List and Model runs, totals, and the manual procedures). Before recording: open `Requirements to Tests Map.pdf`, `ContributorTests_Javadocs/index.html`, Eclipse with the project, and the application ready to start with an empty database. In Eclipse, increase the console font so the Pass lines can be read.

Pranjal Ganvir about 6.5 minutes

[Show this guide, the “TestingScreencast: Task 7 items” table, then `Requirements to Tests Map.pdf` pages 1 and 2.]

This is the Testing screencast for Team 24. I’m Pranjal Ganvir, presenting with Anirudh B. This table is the list of deliverable requirements, 7.1 to 7.4, with the files for each. For 7.1, the Requirements to Tests Map lists all twelve requirements, CS-1 to CS-12. For 7.2, each row gives its positive tests, its negative tests, and the HTML pages that document them. Every requirement has at least one of each. There are seventy-nine tests: seventy-two automated tests in four suites, and seven manual procedures for things only a window can show.

[Scroll to “Every test, its Javadoc, and its screenshot”.]

This table lists every test, its requirement, whether it’s positive or negative, its method in the HTML page, and the name of its screenshot.

[Open `testingAutomation/LessonsCrudTestingAutomation.html`, Method Detail for `crud11And12PersistAcrossReopen()`; then `7.4-CRUD-11-CRUD-12-PersistAcrossReopen.png`.]

For 7.3, every test is its own method, and its Javadoc says three things: the requirement and whether the test is positive or negative, how the test works, and what output means it passed. This pair proves CS-12. It writes two lessons to a database file, deletes one, closes the connection, which is what quitting the app does, then opens a new connection to the same file, which is what restarting does. For 7.4, this is that method’s screenshot, with the comments that mark the first run and the second run.

[Open `7.4-check-helper-and-refusedWith.png`.]

Every test prints its result through check: “Pass” or “Failure”, then the test id and the requirement. For validation, a negative test only passes if the refusal message is the one the requirement calls for, so a value refused for the wrong reason counts as a Failure.

[In Eclipse, run `testingAutomation.TP2TestRunner`. Scroll to the Validation block.]

Here’s the live run. Validation, CS-10 and CS-11. VAL-01 to VAL-05 are the title: a normal title passes; a blank one and one made only of spaces are refused as required; eighty characters passes and eighty-one is refused as too long. VAL-06 to 09 do the same for category, at thirty and thirty-one characters. VAL-10 to 14 are the description. VAL-12, three hundred characters, is the regression test for the HW2 defect that refused anything over 256. VAL-13 accepts exactly two thousand and VAL-14 refuses two thousand and one. VAL-15 to 17 show resolution is optional and capped at two thousand. VAL-18 to 21 show keywords are optional, that four short ones pass, that eleven are refused, and that a keyword over thirty characters is refused. VAL-22 and 23 are the contributor. VAL-24 accepts a complete lesson, and VAL-25 shows a whole lesson is refused when only its title is blank. Twenty-five passed, none failed.

[Scroll to the CRUD block.]

CRUD, which covers create, read, update, delete, ownership, and persistence. CRUD-01 stores a valid lesson, gets an id, and the row count goes up by one. CRUD-02 refuses a blank title and the count stays the same, so nothing was written. CRUD-03 reads that lesson back with all its fields, and CRUD-04 shows an unknown id returns nothing instead of an error. CRUD-05 changes the title and re-reads it from the database: the new title is there, and the contributor and creation date are unchanged. CRUD-06 refuses an update to a blank title and the stored title stays put. CRUD-07 deletes the lesson, and CRUD-08 shows deleting it again reports false. CRUD-09 and 10 check ownership: the contributor is recognised; another user, the same name in different capitals, and a missing name are not. CRUD-11 and 12 are the restart test I just showed. CRUD-13 and 14 build the table layout HW2 left behind: saving now works, and the old HW2 row is kept in the renamed table. Fourteen of fourteen. Anirudh will take the List and Model suites.

Anirudh B about 5.5 minutes

[Scroll to the List block.]

I'm Anirudh. The List suite works on three seeded lessons: A and B in Database, C in GUI. LIST-01 reads all three, and LIST-02 shows an empty database gives an empty list rather than an error. LIST-03 searches "JDBC", which only appears in keywords, and finds exactly A and B, so keywords are searched. LIST-04 searches a word no lesson has and gets nothing. LIST-05 filters the Database category, typed in lower case, and gets A and B. LIST-06 gets nothing for a category nobody uses. LIST-07 returns exactly Arush's two lessons, and LIST-08 nothing for an unknown user. LIST-09 gives the category filter its choices, Database and GUI, each once. LIST-10 chains a search and a filter. LIST-11 confirms newest first, C, B, A. LIST-12 shows search ignores case. LIST-13 shows an empty search term matches nothing at the list level. Thirteen of thirteen.

[Scroll to the Model block.]

The Model suite tests the decisions the three windows make. MOD-01 saves through the editor and checks the contributor is the logged-in user. MOD-02 refuses a blank title. MOD-03 shows that with no filters the page shows everything: "Showing 2 of 2 lessons". MOD-04 checks a user with no lessons is told so in words. MOD-05 and 06 are search on the page, and MOD-17 checks the no-match message names the search term. MOD-07 and 08 are the category filter, and MOD-18 checks the message names the category. MOD-09 and 10 are "Only my lessons". MOD-11 and 12 are the ownership rule behind the Edit and Delete buttons. MOD-13 saves the contributor's change; MOD-14 refuses an edit that empties the description. MOD-15 deletes, and the lesson is gone from the database and the shared list. MOD-16 refuses a delete by someone else, and MOD-20 refuses their edit, with the stored title unchanged. MOD-19 is the message for an empty database. Twenty of twenty.

[Scroll to the combined block.]

The combined result: seventy-two tests, seventy-two passed, none failed. To make sure these tests can actually fail, we put three defects into a copy of the code, and six tests failed, each one naming the requirement that broke.

[Start `LessonsManualTestProcedures` beside the running application (empty database, users contribA and contribB already created). Carry out each procedure and type P.]

The manual procedures cover what only a window can show. MAN-01: as contribA, the empty list says no lessons have been recorded yet. MAN-02: in New Lesson the contributor is a label, not a field, and the saved lesson shows "by contribA". MAN-03: a blank title brings up "The title is required" and nothing is saved. MAN-04: Delete asks first; Cancel keeps the lesson and OK removes it. MAN-05: as contribB, Edit and Delete are disabled and the note names contribA. MAN-06: contribB can't find the deleted lesson. MAN-07: after quitting and restarting, the lesson is still there. Seven passed. That's the ContributorTests_Javadocs folder. Thanks for watching.

Script: Status Summary 2026-10-12

Presenter: Arush Ugal. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-12 PDF. File name: `Status Summary 2026-10-12.mp4`, in `TP2 Planning and Tracking`.

Arush Ugal about 3.5 minutes

[Open `Plan and Status 2026-10-12.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Monday, October 12, 2026. I'm Arush. The board for this standup shows 0 tasks done, 7 in progress, and 21 still to do. This was our first TP2 standup, so nothing had been completed before it. I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on Contributor requirements list CS-1 to CS-12 and TP2 Team Norms (tracked changes). On the board, Contributor requirements list CS-1 to CS-12 is In Progress, planned to be done by October 13; TP2 Team Norms (tracked changes) is In Progress, planned to be done by October 13. Since the last standup: First TP2 standup. Read the TP2 assignment and rubric; split the Contributor user stories into twelve testable requirements, CS-1 to CS-12 (draft); started the tracked-changes revision of the TP1 norms. For the next standup: Finish CS-1 to CS-12 and the Team Norms for review; start the LessonsLearned attributes. Blocking or concern: The attribute list depends on the team agreeing CS-1 to CS-12, so review is needed by Oct 13.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on LessonsLearnedDatabase (table, CRUD). On the board, LessonsLearnedDatabase (table, CRUD) is In Progress, planned to be done by October 16. Since the last standup: Reviewed the HW2 database class and listed the columns TP2 needs: keywords, the two dates, and the three TP3 review attributes. For the next standup: Write the table creation with ALTER TABLE ADD COLUMN IF NOT EXISTS for each new column, and an in-memory connection for tests. Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on LessonsLearnedList entity class and AICoaching.pdf: one field per member. On the board, LessonsLearnedList entity class is In Progress, planned to be done by October 18; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: Reviewed the HW2 list class and mapped every list operation the GUI will need: read all, search, category filter, contributor filter, categories, and the three persistent changes. Took the Keywords field for AICoaching. For the next standup: Turn the mapping into method signatures; research keyword extraction tools. Blocking or concern: Coding the list waits for the LessonsLearned constructors (Arush, due Oct 16).

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on LessonInputPolicy (HW2 length fix, keywords) and AICoaching.pdf: one field per member. On the board, LessonInputPolicy (HW2 length fix, keywords) is In Progress, planned to be done by October 16; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: Reviewed the HW2 LessonInputPolicy and found that descriptions over 256 characters are refused although the limit is 2000. Took the Category field for AICoaching and will assemble the PDF. For the next standup: Write a failing test for the 256-character defect, then fix it; add keyword validation. Nothing is blocking this work.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on guiLessonEditor (Model, View, Controller) and AICoaching.pdf: one field per member. On the board, guiLessonEditor (Model, View, Controller) is In Progress, planned to be done by October 20; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: Reviewed guiRole1, guiNewAccount, and guiUserUpdate to follow the Foundations MVC pattern. Took the Resolution field for AICoaching. For the next standup: Sketch the editor and detail pages within the 800 by 600 window. Blocking or concern: View classes wait for the entity class (Oct 16).

[Return to the task board.]

The next standup is on October 14, 2026. That's the summary.

Script: Status Summary 2026-10-14

Presenter: Karan Patel. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-14 PDF. File name: `Status Summary 2026-10-14.mp4`, in `TP2 Planning and Tracking`.

Karan Patel about 3.5 minutes

[Open `Plan and Status 2026-10-14.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Wednesday, October 14, 2026. I'm Karan. The board for this standup shows 2 tasks done, 7 in progress, and 19 still to do. Since the last standup, these tasks were completed and marked Done: Contributor requirements list CS-1 to CS-12 (Arush, planned for October 13); TP2 Team Norms (tracked changes) (Arush, planned for October 13). I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on LessonsLearned entity class. On the board, LessonsLearned entity class is In Progress, planned to be done by October 16. Since the last standup: CS-1 to CS-12 agreed by the team and Team Norms finished (both Oct 13). LessonsLearned: twelve attributes and the three constructors written and pushed. For the next standup: Write create, read, update, delete, validate, isOwnedBy, and matches. Nothing is blocking this work.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on LessonsLearnedDatabase (table, CRUD). On the board, LessonsLearnedDatabase (table, CRUD) is In Progress, planned to be done by October 16. Since the last standup: CREATE TABLE and the six ALTER TABLE ADD COLUMN IF NOT EXISTS statements written; connectToDatabase(url) overload added for in-memory test databases. For the next standup: addLesson with generated keys, getAllLessons ordered by id descending, getLessonById, updateLesson, deleteLesson, deleteAllLessons, getNumberOfLessons. Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on LessonsLearnedList entity class. On the board, LessonsLearnedList entity class is In Progress, planned to be done by October 18. Since the last standup: Method signatures for LessonsLearnedList written against Arush's pushed constructors; Keywords research narrowed to KeyBERT. For the next standup: Implement readAll, createLesson, and deleteLesson, then the subsets. Nothing is blocking this work.

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on LessonInputPolicy (HW2 length fix, keywords) and Validation suite VAL-01 to VAL-25. On the board, LessonInputPolicy (HW2 length fix, keywords) is In Progress, planned to be done by October 16; Validation suite VAL-01 to VAL-25 is In Progress, planned to be done by October 21. Since the last standup: Wrote VAL-12 (300-character description); it failed as expected. Root cause: InputLimits.checkLength stops at 256. Added LessonInputPolicy.checkLongText for the two long fields; VAL-12 now passes. Keyword rules drafted. For the next standup: Finish keyword validation; write VAL cases for every field's required and length rules. Nothing is blocking this work.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on guiLessonEditor (Model, View, Controller) and AICoaching.pdf: one field per member. On the board, guiLessonEditor (Model, View, Controller) is In Progress, planned to be done by October 20; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: Paper sketches of the editor and detail pages done; both fit 800 by 600 with the Foundations absolute-position Pane layout. Resolution field concept drafted. For the next standup: Start ViewLessonEditor once LessonsLearned is finished. Nothing is blocking this work.

[Return to the task board.]

The next standup is on October 16, 2026. That's the summary.

Script: Status Summary 2026-10-16

Presenter: Anirudh B. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-16 PDF. File name: `Status Summary 2026-10-16.mp4`, in `TP2 Planning and Tracking`.

Anirudh B about 3.5 minutes

[Open `Plan and Status 2026-10-16.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Friday, October 16, 2026. I'm Anirudh. The board for this standup shows 6 tasks done, 7 in progress, and 15 still to do. Since the last standup, these tasks were completed and marked Done: LessonsLearned entity class (Arush, planned for October 16); LessonsLearnedDatabase (table, CRUD) (Karan, planned for October 16); LessonInputPolicy (HW2 length fix, keywords) (Pranjal, planned for October 16); FoundationsMain: open the lessons table (Arush, planned for October 16). I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on Clean compile of the whole project. On the board, Clean compile of the whole project is In Progress, planned to be done by October 20. Since the last standup: LessonsLearned finished (CRUD, validation, ownership, search). FoundationsMain now opens the lessons table after the user tables; both connections work together. For the next standup: Clean compile against the JavaFX module path and the H2 jar; then start the Task 3 Javadoc. Nothing is blocking this work.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on guiLessonsList (Model, View, Controller) and AICoaching.pdf: one field per member. On the board, guiLessonsList (Model, View, Controller) is In Progress, planned to be done by October 20; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: LessonsLearnedDatabase finished, all seven methods. Started ModelLessonsList and the ViewLessonsList layout. Title field concept drafted for AICoaching. For the next standup: Finish guiLessonsList: search, category filter, Only my lessons, New Lesson, Open, Back, Quit. Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on LessonsLearnedList entity class and Lessons Learned button on Role1 and Role2 home. On the board, LessonsLearnedList entity class is In Progress, planned to be done by October 18; Lessons Learned button on Role1 and Role2 home is In Progress, planned to be done by October 19. Since the last standup: LessonsLearnedList: readAll, createLesson, deleteLesson done; searchByText and filterByCategory in progress. For the next standup: Finish the list class; add the Lessons Learned button to the Role1 and Role2 home pages. Nothing is blocking this work.

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on Validation suite VAL-01 to VAL-25 and AICoaching.pdf: one field per member. On the board, Validation suite VAL-01 to VAL-25 is In Progress, planned to be done by October 21; AICoaching.pdf: one field per member is In Progress, planned to be done by October 19. Since the last standup: LessonInputPolicy finished; the first 12 VAL cases pass. AICoaching: Description, Resolution, and Category sections drafted with mockups. For the next standup: Collect the Title and Keywords sections; extend the VAL suite. Blocking or concern: Waiting for the Title and Keywords drafts (Karan, Anirudh), due Oct 18.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on guiLessonEditor (Model, View, Controller). On the board, guiLessonEditor (Model, View, Controller) is In Progress, planned to be done by October 20. Since the last standup: ViewLessonEditor laid out with a character counter under every field; contributor shown as a label, not a field. For the next standup: ControllerLessonEditor and ModelLessonEditor: save, cancel, ownership check. Nothing is blocking this work.

[Return to the task board.]

The next standup is on October 19, 2026. That's the summary.

Script: Status Summary 2026-10-19

Presenter: Moksha Dev. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-19 PDF. File name: `Status Summary 2026-10-19.mp4`, in `TP2 Planning and Tracking`.

Moksha Dev about 3.5 minutes

[Open `Plan and Status 2026-10-19.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Monday, October 19, 2026. I'm Moksha. The board for this standup shows 11 tasks done, 9 in progress, and 8 still to do. Since the last standup, these tasks were completed and marked Done: LessonsLearnedList entity class (Anirudh, planned for October 18); AICoaching.pdf: one field per member (All five, planned for October 19); guiLessonsList (Model, View, Controller) (Karan, planned for October 20); guiLessonEditor (Model, View, Controller) (Moksha, planned for October 20); Lessons Learned button on Role1 and Role2 home (Anirudh, planned for October 19). I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on Clean compile of the whole project. On the board, Clean compile of the whole project is In Progress, planned to be done by October 20. Since the last standup: Reviewed the nine new GUI classes. Fixed two import paths in guiLessonsList and the opens lines in module-info.java. For the next standup: Finish the clean compile; start the Task 3 Javadoc. Nothing is blocking this work.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on GUI Model suite MOD-01 to MOD-16 and Contributor_Javadocs and screenshots. On the board, GUI Model suite MOD-01 to MOD-16 is In Progress, planned to be done by October 22; Contributor_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: guiLessonsList finished (Oct 19). AICoaching Title section delivered. Started the GUI Model suite and the Task 4 package screenshots. For the next standup: MOD cases for the list, editor, and detail Models. Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on CRUD suite CRUD-01 to CRUD-12 and List suite LIST-01 to LIST-10. On the board, CRUD suite CRUD-01 to CRUD-12 is In Progress, planned to be done by October 21; List suite LIST-01 to LIST-10 is In Progress, planned to be done by October 22. Since the last standup: LessonsLearnedList finished (Oct 18); Lessons Learned button on both home pages (Oct 19). CRUD suite first run: 10 of 12 pass. CRUD-02 and CRUD-06 failed because create and update wrote the row without checking validate's result; Arush fixed both on the same day. For the next standup: Rerun CRUD; write the List suite. Nothing is blocking this work.

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on Validation suite VAL-01 to VAL-25, TP2TestRunner (all suites, one run), and Requirements to Tests Map. On the board, Validation suite VAL-01 to VAL-25 is In Progress, planned to be done by October 21; TP2TestRunner (all suites, one run) is In Progress, planned to be done by October 22; Requirements to Tests Map is In Progress, planned to be done by October 23. Since the last standup: AICoaching.pdf assembled from the five sections (Oct 19). VAL suite at 18 cases, all passing. For the next standup: Finish VAL to 25 cases; write TP2TestRunner; start the Requirements to Tests Map. Nothing is blocking this work.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on guiLessonDetail (Model, View, Controller) and Contributor_Javadocs and screenshots. On the board, guiLessonDetail (Model, View, Controller) is In Progress, planned to be done by October 21; Contributor_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: guiLessonEditor finished (Oct 19). ViewLessonDetail laid out; Edit and Delete disabled for non-contributors. For the next standup: ControllerLessonDetail with delete confirmation, and ModelLessonDetail. Nothing is blocking this work.

[Return to the task board.]

The next standup is on October 22, 2026. That's the summary.

Script: Status Summary 2026-10-22

Presenter: Pranjal Ganvir. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-22 PDF. File name: `Status Summary 2026-10-22.mp4`, in `TP2 Planning and Tracking`.

Pranjal Ganvir about 3.5 minutes

[Open `Plan and Status 2026-10-22.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Thursday, October 22, 2026. I'm Pranjal. The board for this standup shows 18 tasks done, 4 in progress, and 6 still to do. Since the last standup, these tasks were completed and marked Done: guiLessonDetail (Model, View, Controller) (Moksha, planned for October 21); Clean compile of the whole project (Arush, planned for October 20); Validation suite VAL-01 to VAL-25 (Pranjal, planned for October 21); CRUD suite CRUD-01 to CRUD-12 (Anirudh, planned for October 21); List suite LIST-01 to LIST-10 (Anirudh, planned for October 22); GUI Model suite MOD-01 to MOD-16 (Karan, planned for October 22); TP2TestRunner (all suites, one run) (Pranjal, planned for October 22). I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on Lessons_Learned_Javadocs and screenshots. On the board, Lessons_Learned_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: Whole project compiles clean: 67 source files, 0 errors (Oct 20). Started the Task 3 Javadoc. For the next standup: Finish Lessons_Learned_Javadocs and the 3.1, 3.3, 3.4, and 3.5 screenshots. Nothing is blocking this work.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on Contributor_Javadocs and screenshots. On the board, Contributor_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: GUI Model suite finished: 16 cases. First run: MOD-04 failed; statusMessage said nothing matched when only Only my lessons was ticked. Fixed the branch order; 16 of 16 pass. Task 4 Javadoc generated. For the next standup: Remaining Task 4 screenshots (4.2, 4.4, 4.5). Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on ContributorTests_Javadocs and screenshots. On the board, ContributorTests_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: CRUD suite 12 of 12 (Oct 21); List suite 10 of 10 (Oct 22). Started the Javadoc for the test classes. For the next standup: Task 7.4 screenshots of every test's code. Nothing is blocking this work.

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on Requirements to Tests Map and ContributorTests_Javadocs and screenshots. On the board, Requirements to Tests Map is In Progress, planned to be done by October 23; ContributorTests_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: VAL suite finished at 25 cases (Oct 21). TP2TestRunner runs all four suites: 63 of 63 pass. Map drafted with every requirement's positive and negative tests. For the next standup: Cross-check every test id in the map against the suites; finish the map PDF. Blocking or concern: Map needs the final screenshot names from Anirudh and Karan.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on Contributor_Javadocs and screenshots. On the board, Contributor_Javadocs and screenshots is In Progress, planned to be done by October 23. Since the last standup: guiLessonDetail finished (Oct 21). 4.2 MVC screenshot for the list page captured. For the next standup: 4.4 and 4.5 screenshots for the editor and detail packages. Nothing is blocking this work.

[Return to the task board.]

The next standup is on October 24, 2026. That's the summary.

Script: Status Summary 2026-10-24

Presenter: Arush Ugal. Target 3.5 minutes (allowed 3–5), about 40 seconds per member; pause on each slide for a few seconds before speaking. Do not show your face. Show the slide each member showed at the standup, and the Plan and Status 2026-10-24 PDF. File name: `Status Summary 2026-10-24.mp4`, in `TP2 Planning and Tracking`.

Arush Ugal about 3.5 minutes

[Open `Plan and Status 2026-10-24.pdf`, page 1, the task board.]

This is the status summary for the Team 24 standup on Saturday, October 24, 2026. I'm Arush. The board for this standup shows 22 tasks done, 6 in progress, and 0 still to do. Since the last standup, these tasks were completed and marked Done: Requirements to Tests Map (Pranjal, planned for October 23); Lessons_Learned_Javadocs and screenshots (Arush, planned for October 23); Contributor_Javadocs and screenshots (Karan, Moksha, planned for October 23); ContributorTests_Javadocs and screenshots (Anirudh, Pranjal, planned for October 23). I'll go through each member's in-progress work as they showed it.

[Show Arush's standup slide, then Arush's block under "In-progress work, by member".]

Arush is working on LessonsLearnedScreencast, Six Status Summary screencasts, Checklist, ZIP, noon safety upload, and Peer evaluation and Canvas receipt. On the board, LessonsLearnedScreencast is In Progress, planned to be done by October 25; Six Status Summary screencasts is In Progress, planned to be done by October 25; Checklist, ZIP, noon safety upload is In Progress, planned to be done by October 26; Peer evaluation and Canvas receipt is In Progress, planned to be done by October 26. Since the last standup: Lessons_Learned_Javadocs finished with its screenshots (Oct 23). For the next standup: Record LessonsLearnedScreencast with Anirudh; produce the Oct 12 and Oct 24 Status Summaries; run the checklist and make the noon upload on Oct 26; remind every member to submit the peer evaluation and the Canvas receipt. Nothing is blocking this work.

[Show Karan's standup slide, then Karan's block under "In-progress work, by member".]

Karan is working on PhaseTwoGUIScreencast and Six Status Summary screencasts. On the board, PhaseTwoGUIScreencast is In Progress, planned to be done by October 25; Six Status Summary screencasts is In Progress, planned to be done by October 25. Since the last standup: Contributor_Javadocs finished with Moksha (Oct 23). For the next standup: Record PhaseTwoGUIScreencast with Moksha; produce the Oct 14 Status Summary. Nothing is blocking this work.

[Show Anirudh's standup slide, then Anirudh's block under "In-progress work, by member".]

Anirudh is working on LessonsLearnedScreencast, TestingScreencast, and Six Status Summary screencasts. On the board, LessonsLearnedScreencast is In Progress, planned to be done by October 25; TestingScreencast is In Progress, planned to be done by October 25; Six Status Summary screencasts is In Progress, planned to be done by October 25. Since the last standup: ContributorTests_Javadocs finished with Pranjal (Oct 23). For the next standup: Present in LessonsLearnedScreencast and TestingScreencast; produce the Oct 16 Status Summary. Blocking or concern: Presents in two main screencasts, so his parts are kept short (see the table below).

[Show Pranjal's standup slide, then Pranjal's block under "In-progress work, by member".]

Pranjal is working on TestingScreencast and Six Status Summary screencasts. On the board, TestingScreencast is In Progress, planned to be done by October 25; Six Status Summary screencasts is In Progress, planned to be done by October 25. Since the last standup: Requirements to Tests Map finished (Oct 23). Prepared the live TP2TestRunner run for the TestingScreencast. For the next standup: Record TestingScreencast with Anirudh; produce the Oct 22 Status Summary. Nothing is blocking this work.

[Show Moksha's standup slide, then Moksha's block under "In-progress work, by member".]

Moksha is working on PhaseTwoGUIScreencast and Six Status Summary screencasts. On the board, PhaseTwoGUIScreencast is In Progress, planned to be done by October 25; Six Status Summary screencasts is In Progress, planned to be done by October 25. Since the last standup: All Contributor_Javadocs screenshots finished (Oct 23). For the next standup: Record PhaseTwoGUIScreencast with Karan; produce the Oct 19 Status Summary. Nothing is blocking this work.

[Return to the task board.]

This was the last TP2 standup before submission. That's the summary.
